DEVELOP A LEXICAL ANALYZER TO RECOGNIZE TOKENS USING LEX TOOL

AIM:

To implement the program to identify C keywords, identifiers, operators, end statements like [], {} using LEX tool.

ALGORITHM

- Define patterns for C keywords, identifiers, operators, and end statements using regular expressions. Use % option noyywrap to disable the default behavior of yywrap.
- Utilize regular expressions to match patterns for C keywords, identifiers, operators, and end statements. Associate each pattern with an action to be executed when matched.
- Define actions to print corresponding token categories for matched patterns. Handle special cases like function declarations, numeric literals, and processor directives separately.
- Open the input file (sample.c in this case) for reading. Start lexical analysis using yylex() to scan the input and apply defined rules.
- Increment a counter (n) each time a newline character is encountered. Print the total number of lines at the end of the program execution.

PROGRAM

```
%option noyywrap
letter [a-zA-Z]
digit [0-9]
id [\_|a-zA-Z]
AO [+|-|/|\%|^*]
RO [<|>|<=|>=|==]
pp [#]
% {
int n=0;
% }
%%
"void"
                              printf("%s return type\n",yytext);
                              printf("%s Function\n",yytext);
{ letter } * [(][)]
                              printf("%s keywords\n",yytext);
"int"|"float"|"if"|"else"
"printf"
                                     printf("%s keywords\n",yytext);
                              printf("%s Identifier\n",yytext);
{id}({id}|{digit})*
{digit}{digit}*
                                     printf("%d Numbers\n", yytext);
                                     printf("%s Arithmetic Operators\n", yytext);
{AO}
210701314 – VISHVA A
```

OUTPUT

```
[root@fedora student]# vi 314_exp3.l
[root@fedora student]# lex 314_exp3.l
[root@fedora student]# /a.out
#include<stdio.h> void main(){ int a,b; }
#include<stdio.h> processor Directive
    void return type
    main() Function
{ others
    int keywords
    a Indentifier
, others
b Identifier
; others
} others
} others
```

RESULT

To implement the program to identify C keywords, identifiers, operators, end statements like using LEX tool has been executed.
